Reportive V10: The adaptive Self-Service Business Intelligence solution

Not just reporting

Reportive is an **engaging solution** which enlightens your Analytics.

Whether you have a solution in place or not, Reportive **enhances** your **data** thanks to a flexible architecture and compelling dashboards. Now you can really claim to:

Mix any kind of data **seamlessly**,

Quickly build compelling static AND dynamic reports,

Distribute KPIs in only a few clicks,

Unify the reports' look and feel to enable quick understanding

Ensure the **reliability** of your data and analyses,

And work in complete **autonomy** while keeping your IT in control.

It's your data,
Simply better and faster.
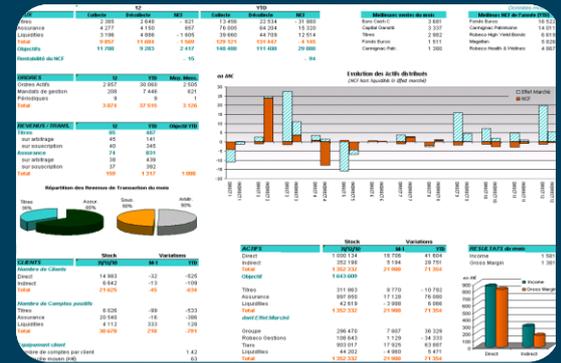

You said Self-Service?

Quickly and easily build and update your own custom dashboards.

Work at business concept level throughout the entire lifecycle. No coding or data structure knowledge required.

Data quality control and information tracing is ensured all the way thanks to built-in features.

Technical tasks are simplified. Development is broken down into basic tasks, each easier to understand and work with.

Reports are produced in any static format (Excel, PowerPoint, Word, HTML, PDF, XPS, Reportive...) and shared on the fly.

Autonomy in design
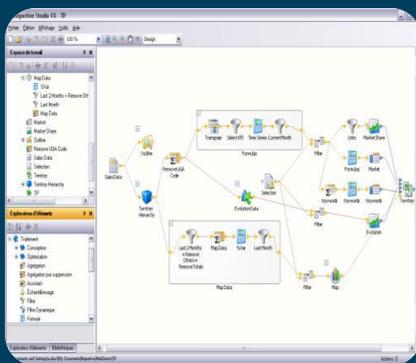

Build local or server Cubes as need be.

Cubes can use multiple data sources.

Benefit from built-in drag and drop features.

Local Cubes drastically improve browsing performance and data is available offline.

Local cube files entails you can access the data you need and have access to whenever you need. Each user sees their dimensions, levels, attributes, and measures significant to them.

Ensure quick adoption from end users thanks an Interface based on Microsoft Office.

Interactive dashboard design made easy

Create dynamic filters, use multiple browsing features and built-in or custom-made formulas.

Customize as need be with your company brand images and looks.

Drag and drop features allow for simplicity and time saving.

Not a single line of code required.

Empowering business users

Analyze, query, manipulate your data and get instant calculation results.

Make your information visual using Reportive graphical options and built-in mapping feature.

Powerful drill down and filtering capabilities.

Automatic synchronization on applied filters.

Users with read-only access rights access dynamic and qualitative information without any room for mistake.
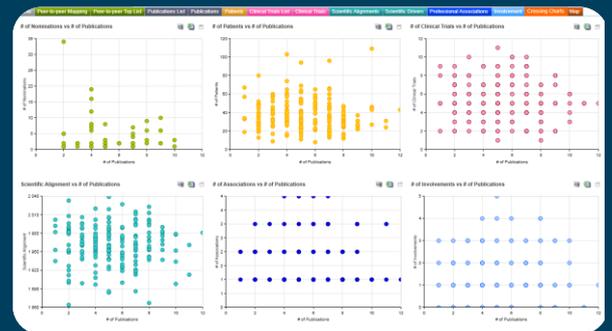

Create once, use many times

Reportive's Composite Objects allow you to go from generic applications to a specific solution 10 times faster than with any other application.

Easily published in libraries, shared, copied, reused for other projects, Composite Objects are easily managed.

Report designs can be saved as well as graphical preferences.

Reportive provides an indefinite number of functions allowing you to gain time a bit more each time.

Save development time with Reportive's integrated ETL

You should stop pulling your hair out right now. Reportive's integrated extraction and transformation engine provides innovative features so that you do not need a data warehouse any more!

Cleanse and consolidate using any data source (i.e. text files, xml, SQLServer, SAP BW, Essbase, BO and much more)
