

Panintelligence for Salesforce

The Panintelligence dashboard is a business intelligence application that can span multiple databases, in the cloud and on-premise. This allows users to access their data in real-time and help them make better informed decisions. It is easy to link to your Salesforce CRM database and other on-premise applications.

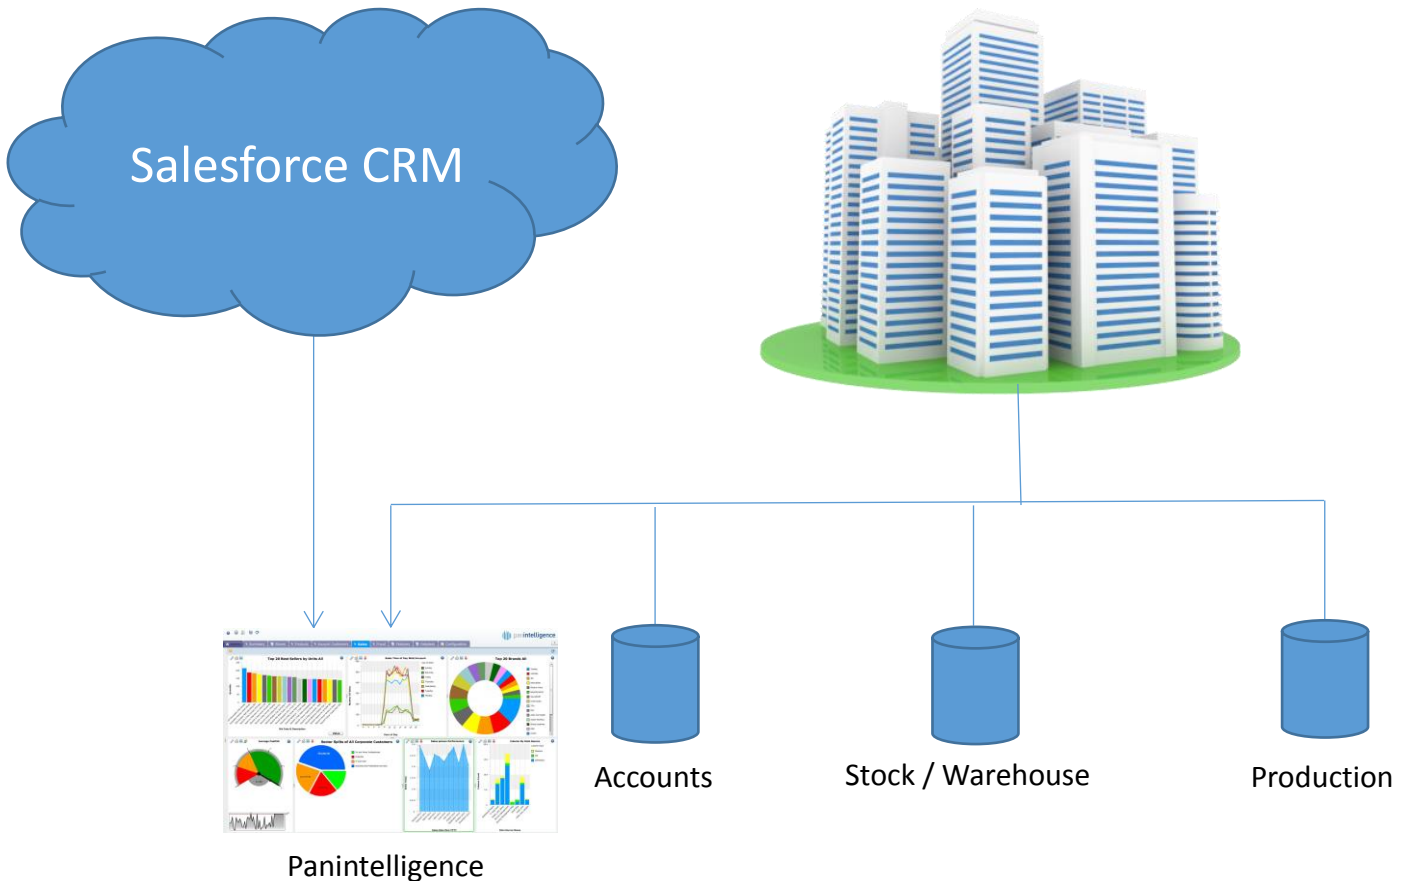

Panintelligence for Salesforce provides a top-down view of the data allowing users to make proactive and timely decisions to improve performance, gain greater control of sales cycles and provide more clarity on the performance of staff and customer buying habits.

- Bring cloud and on premise data together in one place
- Highlight exceptions and trends in your Salesforce data
- Greater flexibility to configure reports suitable for your business
- Bring all of your data together within one reporting tool
- Access all of your data from anywhere
- Ability to drill into data for more detailed analysis

Panintelligence for Salesforce comes with an initial set of standard charts and tables. Users can create as many additional charts as required, and with an intuitive user interface, it requires little or no training. The software is quick and easy to install and can be effortlessly rebranded to fit your existing corporate style.

Panintelligence for Salesforce

- Bring cloud and on premise data together in one place
- Bring all of your data together within one reporting tool
- Access all of your data from anywhere

"Our customers were very impressed with the immediate access they had to their data via a simple interface. The ability to query the data themselves, and follow their train of thought interactively, made it a hugely valuable tool for day to day operations."

Phil Stothard, Director Business Intelligence and Data, ReD
